

Redefining Facial Recognition Efficiency: Unmatched Accuracy Drives Measurable Cost Savings

CASE STUDY

For a duration of one month, a prominent London casino conducted a direct comparison test, deploying Corsight's Fortify Facial Recognition software against a competing system. **The outcome left no room for ambiguity:**

		 corsight	competitor
	POIs	20,000	20,000
	Cameras	3	3
	False Positives	0	482
	Actual Suspects Identified	4	0

482 FP x £7.2 x 12 = £41,645

TOTAL ANNUAL COST SAVING

* Based on an annual average wage of £30k for a UK security employee, with an average of 30 minutes wasted assessing each false positive (costing £7.2), 482 incidents x £7.20 = £3,470.40 per month
